Summary of Essential Content to Prepare Students for Calculus

Statement of Purpose.

The purpose of this document is to summarize the most essential mathematical content that every student must learn in order to be successful in first- and second-semester calculus. To "learn" means to take possession of the knowledge so that the student can apply it, unprompted, in new or even unfamiliar settings.

Number Systems and Arithmetic	
1. Understand Fundamental Properties of Numbers.	
* Rational Numbers	
* Irrational Numbers	
In particular: i) understand operations applied to radicals	
	Comment [LS3]: I agree with N-RN 3 for
	the above part but I think this aligns with N-RN 2
Properties of Expressions	RN 2
	Commont II S41: Alians with N DN 2
	Comment [LS4]: Aligns with N-RN 2
4. Know definition and properties of logarithms.	Comment [LS5]: Aligns with F-LE 8
Laws of Exponents and Radicals	
Laws of Logarithms	
Properties of Fauglity	
<u>Properties of inequalities</u> (Know the properties of inequalities.)	
Rectangular Coordinate Plane	
-	
	1
	 2. Perform Addition, Subtraction, Multiplication, Division, Exponentiation with * Integers * Rational Numbers * Irrational Numbers In particular: i) understand operations applied to radicals ii) be comfortable with π, e, square roots Properties of Expressions 1. Understand fundamental properties of expressions. 2. Perform standard factoring and expansion formulae and techniques: * trinomials * perfect squares * difference of squares * grouping * and use as structural templates for arbitrary <i>f</i> and <i>g</i>. * perform polynomial long division (the <i>Division Algorithm</i>) 3. Know laws of exponents and radicals. 4. Know definition and properties of logarithms.

	* relation: Any set of ordered pairs.	
	* graph: The plotting of a relation.	
	* domain: The set of first coordinates of a relation.	
G-GPE 7	* range: The set of second coordinates of a relation.	Comment [LS1]: There is no G-GMD 7.
	2. Distance Formula	Change to G-GPE 7
	3. Pythagorean Theorem	
	4. Understand and use the geometry/algebra of lines in 2-dimensions:	
	* slope	
G-GPE 5, <mark>G-CO</mark> 1	* point/slope and slope/intercept forms for a line.	
6-001	* parallel	Comment [LS2]: Change to G-CO 1
	* perpendicular	
F-IF 1		
F-IF 9	G. <u>Functions</u>	
	1. Know that a function is a rule that assigns to each input exactly one output	
F-BF 3	2. Understand what are Domains and Ranges, and be able to find them.	
	3. Perform transformations of functions:	
	* horizontal/vertical shifts	
	* stretching/compressing	
F-BF 3	* reflections	
F-IF 7b	4. Be able to examine functions for symmetry.	
F-IF 1,2, 3	5. Be able to read and construct Piecewise Functions.	
	6. Read/use the algebraic notation of functions, their operations and compositions:	
	* Special structures:	
	* $g(x) = f(x) $, i.e. what this particular composition produces	
F-IF 6	* Difference Quotient	
	* Average rate of change in f over an interval $[a, b]$	
F-BF 4	7. Understand inverse functions:	
	* Understand the property "one-to-one", and what it implies.	
	* Find and use the inverse of f	
	* Contrast the above and its notation to the reciprocal of f	
F-TF 1	8. Some Trigonometric Particulars to know	
F-TF 1	* DMS / radians	
F-TF 2, 3	* the Unit Circle and its role in defining trigonometric objects	
,-	* sine and cosine values for reference angles	
	(multiples of fragments of π)	
	* Definitions for each ratio	
	* Some Fundamental Trigonometric Identities:	
	* Pythagorean identities	
	* Even/odd identities	
	* Sum/difference identities for sine and cosine	
	* Double-angle identities for sine and cosine	

F-IF 4 F-IF 5 F-TF 79. Applications9. Applications* Have experience relating and using functions and their properties in applied settings.F-IF 5 F-TF 7* Have experience interpreting slopes as rates of changes in applied settings.F-IF 8 F-IF 8Solving Equations * Zero Product Property * Square Root Property * Completing the square and its offspring, the "quadratic formula" * The Factor Theorem * The Linear Factorization Theorem * Equivalence of exponents, <i>i.e.</i> , $b^x = b^y \leftrightarrow x = y$.A-REI 1,3 A-REI 4, N-CN 7 A-REI 22. Equation types and their solutions: * Linear - can always solve. * Rational

N-CN 9 A Higher-degree polynomial – requires a bit of theory	
IN-CIN 7	
A-REI 2 * Rational	
* Radical	
F-BF 5 * Exponential – often requires $b^x = y \Leftrightarrow \log_b y = x$	
F-BF 5 * Logarithmic – often requires $b^{x} = y \Leftrightarrow \log_{b} y = x$	
	_
* Trigonometric – solutions are always periodic (if no restrictions) Comment [LS7]: F-TF 5	
H. <u>Geometric Formulae</u>	
1. Some fundamental facts and formulae that consistently appear in the use of	
previous topics:	
G-GPE 7 * Lengths G-GMD 1 * perimeters	
permeters	
* circumference	
G-GPE 7 * Areas	
G-GPE 7 * rectangular	
G-GMD 1 * triangular	
* circular	
G-GMD 1 * Volumes	
G-GMD 1 * rectangular box	
* prism, or any solid with congruent cross-sections	
* sphere	

Table: Function Families and What to Know	Table:	Function	Families and	What to K	now
---	--------	----------	---------------------	-----------	-----

Function Family	Domain	Range	Graph/Shape	Continuity	Intercepts	Symmetry	Continuity	Asymptotes	Endpoint Behavior	Inverse	Division Algorithm	Avg Rate of Change	Growth/Decay	Amplitude	Period	Phase Shift
Constant $f(x) = k$	1	√	1	1	1	1	√		1			1				
Linear $f(x) = mx + b$, √	, √	, √	, √	, √	, √	, √		, √	√		1				
Polynomial $f(x) = ax^n +$, √	, √	, √	, √	, √	, √	, 1		, √	, √		1				
Absolute Value $f(x) = x $	1	1	1	√	√	1	1		1							-
Square Root $f(x) = \sqrt{x}$	1	1	√	1	1	1	1		1	1		1				
Cube Root $f(x) = \sqrt[3]{x}$	1	1	1	1	1	1	1		1	1		1				
<i>nth</i> Root $f(x) = \sqrt[n]{x}$	1	1	1	√	1	1	1	1	1	1		1				
Rational Power $f(x) = x^{n/m}$	1	1	1	1	1	1	1		1	√						
Semicircle $\sqrt{b^2 - x^2}$	1	1	1	1	1	1	1		1							
Rational $f(x) = p(x) / q(x)$	1	1	1	1	1	1	1	1	1	1	1	1				
Exponential $f(x) = a^x$	1	1	1	1	1	1	1	1	1	1		1	1			
Logarithmic $f(x) = \log_b x$	1	1	1	1	1	1	1	1	1	1		1	1			
Sine $f(x) = \sin x$	√	1	1	√	1	1	1		1	1		1		1	1	1
Cosine $f(x) = \cos x$	√	1	1	√	1	1	1		1	1		1		1	1	1
Tangent $f(x) = \tan x$	1	1	1	1	1	1	1	1		1		1			1	√
Cotangent $f(x) = \cot x$	1	1														
Cosecant $f(x) = \csc x$	1	1														
Secant $f(x) = \sec x$	√	√
